Facsimile: 07 3848 6033

Emergency Telephone number: **07 3848 6000 (Mon-Fri; 8:00am-4:00pm; AWST)**

2. HAZARDS IDENTIFICATION

Poison Schedule: Not Applicable

AUS

EA-230
220-240V-50Hz
200W

Safety Data Sheet

Before using this encaustic art stylus please read these instructions carefully and follow the safety rules when using the tool.

No guarantee is given for damages or accidents due to non-observance of these instructions and safety norms. Keep these directions and hand them over together with the tool if and when giving it to any new user. With adequate ventilation and proper working temperatures (between 180 and 200°F) encaustic is non-toxic.

SAFETY INSTRUCTIONS

- * **Do not touch tips or heating element whilst hot, grasp the plastic handle only.**
- * **Keep out of reach of children. Supervise if unsure.**
- * **The stylus needs to be placed in a safe position on your work surface. Keep you heated tools on the side where you use them - right for right handed users, left side for left handed users.**

Burns

Heating tools and hot wax can cause burns to the skin. Wear an apron to protect you from spills. If you do not have a sink, keep a bucket of cool water in your studio. If you are burnt, bring the temperature of the burn down immediately by immersing the burn in cool (not cold) water. Do not peel wax off your skin. It will seal the burn from oxygen, and peeling it can tear the skin. Keep the burn immersed for at least half an hour, unless you have a burn kit, in which case apply the dressing once the burn has been cooled down in the water. If the burn is serious, seek medical help.

Notes to physician: Treat symptomatically.
